

Tree Replacement Options

A replacement tree may be provided free of charge on qualifying yard trees that are removed to improve the safety and reliability of MTE's power system. If a replacement is granted, MTE recommends the following trees for replacement of such removals. They are all proven performers for our area, and when properly planted, they will not interfere with the power lines. Other trees may also be appropriate replacement trees. Call an MTE vegetation management specialist at your local area office for more information or for planting advice.

→ Distance from center of utility pole.

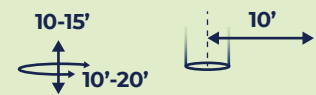

Kousa Dogwood

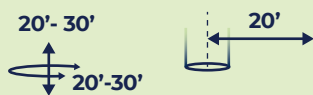

Jane Magnolia

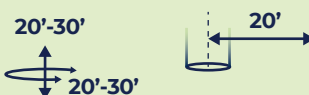

Crape Myrtle

Okame Cherry

American Redbud

Emerald Green Arborvitae

Nantucket Viburnum

Purple Leaf Plum

Amur Maple

Vegetation Management

There are many benefits that come with having trees on your property - shade, beauty, windbreak, privacy, cleaner air, less noise, less glare and higher property values to name a few. But the key to these benefits is to select the right tree and plant it in the right place. Keeping trees away from electric lines and transformers is critical for reliable electric service.

If a tree in your yard is removed to improve the safety and reliability of Middle Tennessee Electric's power system, a replacement tree may be provided free of charge. MTE recommends the following trees for replacement of such removals, which are all proven performers in our area. When properly planted, these trees will not interfere with the power lines or related equipment.

Accredited Utility

**We are proud to be a 2021
Tree Line USA co-op since 2018!**

MTE's vegetation management program is accredited by the Arbor Day Foundation's Treeline USA Program. Our team demonstrates the five core standards to protect and enhance the environment.

Quality Tree Care
Annual Worker Training
Tree Planting and Public Education
Tree-Based Energy Conservation Program
Participate in Arbor Day Celebrations
